Approved Installation Contractors Requirements

The City of Watsonville requires that water service applicants use contractors, approved by the City, for installation of new services. The names of such contractors are maintained on an “Approved Installation Contractors” list provided to water service applicants. To be considered for such approval and be included on the list, a contractor must meet the following requirements:

Eligibility Requirements for Approval:

1. Be licensed by the State of California as a General Engineering Contractor or a C34 Pipeline Contractor.
2. Have competently performed work similar to city water service installation, including working within a public street right-of-way, performing multiple “hot taps” and traffic control within the last five years.
3. Hold a City of Watsonville business license.
4. Hold insurance coverage that meets the City’s requirements.

Approval Process:

1. Contractor submits the attached application, with all required documentation.
2. COW will review the application; contact references, and make a determination of approval within one month.
3. Initial approval, if granted, will be temporary status, until the contractor has completed a minimum of three (3) separate water service installations to the satisfaction of the COW and the customer.
4. Upon successful completion of three installations, the contractor’s name and contact information will be placed on the approved list and provided directly to customers.

Requirements to Maintain Approval:

1. Must construct all facilities in conformance with the latest version of COW Standard.
2. Must comply with all instructions given in the field by the City's authorized representatives.
3. Must correct any deficiencies in its installations that are discovered within the one (1) year guarantee period.
4. Must maintain current copies of Certificates of Insurance and Watsonville business license on file with the COW.

Removal from List

A contractor may be removed from the “Approved Installation Contractors” list at anytime by the COW Public Works & Utilities if determined out of compliance with any of the requirements shown above, or in any other way presents a risk to the quality and efficiency of the City Water.
